**Q1. Construct a program to test if an array contains a specific value.**

**Source code:**

```

package a2task1;
import java.util.Scanner;
public class A2task1 {
    public static void main(String[] args) {
        Scanner sc=new Scanner(System.in);
        int arr[]=new int[50];
        int no,count=0;
        for(int i=0;i<arr.length;i++){
            arr[i]=(int)(Math.random()*100);
        }
        System.out.print("Please enter number which you want to check!:" );
        no=sc.nextInt();
        for(int i=0;i<arr.length;i++){
            if(arr[i]==no){
                System.out.printf("Your number is present at index!:" +i);
                System.out.println();
                count++;
            }
        }
        if(count>0){
            System.out.println("Yes your entered number is in our array! ");
            System.out.println("Your number is appeared "+count+" time in our array!");
        }
        else{
            System.out.print("No your entered number is not in our array! ");
        }
    }
}
  
```

**Output:**

Please enter number which you want to check!:50

No your entered number is not in our array!

**//Again**

Please enter number which you want to check!:23

Your number is present at index!:7

Yes your entered number is in our array!

Your number is appeared 1 time in our array!

**//Again**

Please enter number which you want to check!:50

Your number is present at index!:15

Your number is present at index!:23

Yes your entered number is in our array!

Your number is appeared 2 time in our array!

**Q2. Construct a program to find that given number or string is palindrome or not?****Source code:**

```
package a2task2;
import java.util.Scanner;
public class A2task2 {
    public static void main(String[] args) {
        Scanner sc=new Scanner(System.in);
        int no,rem,rev_num=0;
        String word,rev="";
        System.out.print("please enter the number which you wants to check!: ");
        no=sc.nextInt();
        int temp=no;
        System.out.print("please enter the word which you wants to check!: ");
        word=sc.next();
        while(temp!=0){
            rem=temp%10;
            rev_num=(rev_num*10)+rem;
            temp=temp/10;
        }
        if(rev_num==no){
            System.out.println("Your number is Palindrome!");
        }
        else{
            System.out.println("Your number is not Palindrome!");
        }
        for(int i=word.length()-1;i>=0;i--){
            rev=rev+word.charAt(i);
        }
        if(rev.equals(word)){
            System.out.println("Your String is Palindrome!");
        }
        else{
            System.out.println("Your String is not a Palindrome!");
        }
    }
}
```

**Output:**

please enter the number which you wants to check!: 11211

please enter the word which you wants to check!: MOM

Your number is Palindrome!

Your String is Palindrome!

**//Again**

please enter the number which you wants to check!: 124

please enter the word which you wants to check!: MaMa

Your number is not Palindrome!

Your String is not a Palindrome!
